1. Overview

Analogue signal transducer BM series can measure electrical parameters (e.g. current and voltage) and non-electrical parameters (e.g. temperature and resistance) rapidly and accurately and isolate and convert measured values to standard analogue output signal. It can be not only connected directly with pointer gauges and digital display meters but also integrated with automatic control instruments (e.g. PLC), various A/D converters and computer systems.

3. 2-wire isolator powered by output circuit

Application

A 2-wire direct-current isolator powered by output circuit can isolate and convert direct current and voltage signals on site to 4-20mA output signal. The module is equipped with surge protection circuit so that it is suitable under severe conditions.

Technical parameters		Index
Input	Range	Current: 4-20mA, 0-1mA, 0-20mA Voltage: 0-1V, 0-5V, 0-10V, 0-75mV, etc
	Impedance	Current: 0(4)-20mA, 100Ω 0-1mA, 1kΩ, voltage≥100Ω
	Overload	Current: 100mA or 1W Voltage: 50V at 0-10V
Output	Range	DC4~20mA
	Load	<500 Ω
	Zero adjustment	5%
	Span adjustment	5%
	Protection	Short circuit protection
Power supply	Range	Direct voltage: 8.5-40VDC, normally 24VDC/2W
	Max. current	24mA
Other	Accuracy/linearity	Max. 0.5% of full span
	Temperature effect	≤200ppm/°C
	Response time	≤400ms
	Isolation voltage	2kV between input and output
	Operating/storage temperature	-10°C ~+55°C/-25 ~+70°C
	Installation method	With guide rail TS35

4. 1-input/2-output isolator

Application

The module isolates and converts single-circuit direct current or voltage input signals to mutually-independent two-circuit analogue outputs. It is suitable for the application where a transducer generates one signal circuit to programmer and the other signal circuit to an indicator on site. The module boasts a single input circuit. Therefore, the input voltage drop is almost constant, up to 3.5V and independent from loads. The maximum optocoupler isolation voltage can reach 2kV.

Technical data

Technical parameters		Index
Input	Range	Direct current: 4-20mA, 0-20mA Direct voltage: DC 0-75mV, 0-5V, 0-10V, 0-300V
	Impedance	Variable, voltage drop up to 3.5V
	Overload	Current: 100mA or 1W Voltage: 50V at 0-10V
Output	Range	One circuit: DC 4-20mA; the other circuit: DC 4-20mA or DC 0-5V
	Load	Current: $\leq 500\Omega$; voltage: $\geq 1k\Omega$
	Zero adjustment	15%
	Span adjustment	15%
Power supply	Nominal value and range	DC 24V (alternatively DC 18V-36V)
Accuracy/linearity		Max. 0.5% of full span
Temperature coefficient		$\leq 200\text{ppm}/^\circ\text{C}$
Response time		$\leq 400\text{ms}$
Isolation voltage		2kV between input and each output and between power supply to output
Surrounding conditions	Temperature	Operating temperature: -10 -+55 $^\circ\text{C}$; storage temperature: -25 -+70 $^\circ\text{C}$
	Humidity	$\leq 95\%\text{RH}$, no condensation, place without corrosive gases
	Height above sea level	$\leq 2000\text{m}$
Installation method		With guide rail TS35

5. 4-wire isolator

Application

A 4-wire isolator provides 2kV 3-port isolation for all direct current and voltage signals and eliminates the earth return. It can be equipped with power supply of various standards.

Features

The size of housing is compact. It can be mounted with guide rail TS35.

	Isolation voltage	2kV between input and output and between input and power supply
	Operating/storage temperature	-10°C ~+55°C / -25 ~+70°C
	Installation method	With guide rail TS35

6. Passive isolator

Application

The module converts standard input signals 4-20mA to output signals 4-20mA proportionally via 2kV isolation. It is suitable for applications where it is hard to use the power supply. The input signal powers the module and realizes the coupling via voltage transformer. Therefore, it needs no external power supply.

	Operating/storage temperature	-10°C ~+55°C/-25 ~+70°C

7. 2-wire alternating current isolator powered by output circuit

Application

The module can modulate maximum 5A AC or CT current directly and output the isolated 4-20mA signal. The working status and output level of circuit are indicated with LED. The module is equipped with surge protection circuit so that it is suitable under severe conditions.

8. 2-wire alternating voltage isolator powered by output circuit

Application

The module can convert AC voltage (up to 450VAC) to standard isolated output current 4-20mA. It is equipped with surge protection mechanism and suitable for monitoring the startup and stop of motor.

9. Smart temperature transducer

Application

The module receives inputs from thermocouple and thermal resistance and outputs signals DC0-20mA, 4-20mA, 0-5V or 0-10V linearly and proportionally. It boasts the automatic cold junction compensation (CJC), a surge protection circuit and RS485 communication ports. It can be connected with an external programmer to set parameters and indicate temperature.

13. Direct current and voltage alarm with setting point

Application

It receives the direct current or voltage input and provides a dual-channel alarm output. It sends an alarm if a current or voltage signal exceeds its limit. Set an alarm point between 0% and 100% of input. The alarm point has a hysteresis error of 1% to eliminate the influence of relay contact chatter. The LED in the front can indicate the status of relay. The module can work as auxiliary supply DC24V ($I_{max} = 50mA$) on site.

	Max. input/ protection type	100mA or 1W/Zener diode 50VDC
	Field excitation	Max. 24VDC, 25mA
Output	Output range	Two independent relays, with high/ low jumper setting
	Contact load	10A 250VAC/30VDC (resistive load)
	Adjustment of setting point	0-100% of input span
	Alarm function	High (forward)/ low (reserve) alarm
	Protection	Additional protection is required if relay contacts are used to connect or disconnect inductive loads.
	Dead zone	Hysteresis error: 1% of full span
Power supply	Range	AC85 ~265V or DC100V ~350V
	Power consumption	< 20mA AC (2VA)
Other	Accuracy/linearity	Max. 0.5% of full span
	Temperature effect	< 0.02% /°C
	Response time	(90% of span) <100ms
	Status of LED	A red LED is equipped with each relay. (The LED turns on if its corresponding relay is activated.)
	Isolation	2kV
	Operating/storage temperature	-10°C ~+55°C/-25 ~+70°C

14. Thermal resistance alarm with setting point

Application

It receives inputs from thermal resistance PT100 and provides a dual-channel alarm output. Set an alarm point between 0% and 100% of input. The alarm point has a hysteresis error of 1% to eliminate the influence of relay contact chatter. The LED in the front can indicate the status of relay. The module can work as auxiliary supply DC24V ($I_{max} = 50mA$) on site. Set an (forward) or low (reverse) alarm with the jumper on the top.
